

Education in Italy Pain Therapy

Palliative Care - Pain Therapy

- In countries where this specialty is still not recognized by the University, and among these Italy, the Master is the most effective system to allow young professionals to acquire the knowledge and skills necessary to become palliativists.
- Today, the Master is the path that allows the next generation of Italian palliativists adequate professional training.

Permanent Conference of Master Directors in Palliative Care and Pain

- One of the objectives of this Permanent Conference of Master Directors in Palliative Care and Pain Therapy is to include palliative medicine in all schools of medicine and in all hospitals gives high clinical and assistance to Italy. In the country there is already a prepared and motivated leadership able to work to realize this reality in the coming years.

- The Masters are the only ones in the university system national, to be regulated by a Law, a requirement essential, if you want to build study paths equipped with didactic uniformity and formative solidity.
- In our country the title issued by the Masters is not a requirement necessary for the exercise of the profession in the field of palliative care and of pain therapy.

- As his first act, consistently with the spirit he has brought at its convocation, the Conference implemented a survey of the Master's offer on the national territory in order to identify points of strength and criticality

Which Master?

We can divide them into three groups:

- 1 Master reserved for health professionals with a degree Level I in **Nursing**, Pediatric Nursing, Physiotherapy and Occupational Therapy: it is the first level Master in Palliative Care and Pain Therapy for Professions Health;
- 3 Masters II level reserved for **graduates in Medicine** that have already achieved a specialization: they are the Masters of High Formation and Qualification in Palliative Care for Doctors Specialists, the Master of Higher Education and Qualification in Pediatric Pain and Pediatric Palliative Care for Doctors Pediatricians and the Master of Higher Education and Qualification in Pain therapy;
- 1 Master reserved for **Psychologists** who do not require specialization post-graduation: the II level Master in Palliative Care and Therapy of Pain for Psychologists.

University Credits

- they have been commensurate with the quantity and the specificity of the disciplinary fields provided for by the regulations:
- 60 for the Master for Health Professions, for Psychologists and also for that of High Training and Qualification in Pain Therapy (much educational on the topic was already carried out during the School of Specialization in Anesthesia and Reanimation, qualification required for access to the latter Master)
- for the two Masters of Higher Education and Qualification in Palliative Care (of Adult and Pediatric) are 120 (credits judged necessary for complete specialist training,

Key feature

- Half of credits are assigned after the stage in accredited structures
- Half to the frequency at the theoretical lessons

- Master I livello CP e TD per Professioni Sanitarie
- Master CP per Medici Specialisti
- Master TD per Medici Specialisti
- Master CPP e TD per Medici Pediatri
- Master II livello CP e TD per Psicologi

In the School of Medicine

- about a month ago the institution of specific courses in palliative care and pain therapy in the medical degree course was approved in an interministerial committee between the ministry of health and the university.
- From the next academic year our students will have to earn credits in these two specific
