STABILNA ANGINA PEKTORIS

- Bolovi u grudima su provocirani naporom, prilikom uzbuđenja, nakon obilnog obroka i pri izlasku na hladnoću
- Traju nekoliko minuta, rijetko do 10-15 minuta, prestaju naglo kada se ukloni napor odnosno drugi činioci koji su provocirali anginu, smanjuju se na Nitroglicerina

William Heberden 1770.god

- “Postoji tegoba u grudnom košu..... i sasvim je odgovarajuće da nosi naziv angina pectoris.... dobijaju je.... naročito kada se šetaju poslije jela, sa bolnim i veoma neprijatnim osjećajem u grudnom košu, sa osjećajem da će se umrijeti ako se ona pojača ili nastavi. U trenutku kada zastanu, sve ove nelagodnosti iščezavaju. **Os sterni** je obično središte ove bolesti. Katkad je udružena sa pojavom bola u srednjem dijelu lijeve ruke”.

Epidemiologija

- Svaki 30 sekundi amputira se jedan eksteremitet kao posledica dijabetes komplikacija.
- Na svakih 6 sekundi umre jedna osoba od dijabetes komplikacija.
- Svaki 5 sekundi dijagnostifikuje se jedna nova osoba sa dijabetesom.
- Do 2025. godine dijabetes će imati pola milijarde osoba, tj. svaki 12-i čovjek ili čitava evropska populacija!

Smjernice za liječenje bola u pzzoktobar 2020 Lj Kezunović, predavanje za online kurs - PowerPoint

FILE HOME INSERT DESIGN TRANSITIONS ANIMATIONS SLIDE SHOW REVIEW VIEW

Clipboard Font Paragraph Drawing Editing

HEPMP Strengthening Capacities for Higher Education of Pain Medicine in Western Balkan countries – HEPMP

Procjena naučne zasnovanosti smjernica

- Smjernice se oblikuju na osnovu istraživanja i iskustva dobre kliničke prakse
- Cilj je poboljšanje dostupnosti najboljih stručnih informacija, uključujući i informacije o lijekovima u svim zemljama
- Crna Gora još nema nacionalne smjernice za liječenje bola na nivou PZZ
- Nama su dostupne smjernice Hrvatskog društva za liječenje bola HLZ (za akutni, kancerski i neuropatski bol)

<https://www.hdlb.org/publikacije/publikacije-za-zdravstvene-djelatnike/smjernice-hrvatskog-drustva-za-lijecenje-boli/>

- Ove smjernice su u skladu sa smjernicama Evropskog udruženja za palijativnu njegu, IASP i NICE.

Hepatocelularni karcinom(HCC)

Javlja se u **1 – 2,5%** u petoj i šestoj deceniji. U 80% javlja se kod **ciroze jetre**. Alkoholna ciroza jetre razvija u **3,2%** hepatocelularni karcinom jetre. Ovaj tip karcinoma jetre može se razviti i kod kardijalne, bilijarne i metaboličke ciroze. Hronični **hepatit B** može biti razlog ovog karcinoma.

U odnosu **na rast**, postoje tri tipa ovog karcinoma jetre;

1. tumor do 5 cm veličine koji je nodularni, solitarni ili multipli;
2. **tumori velikog rasta- desni lobus jetre i**
3. difuzni tip.

Etiološka podjela kancerske boli

Project number: 585927-EPP-1-2017-1-RS-EPPKA2-CBHE-JP (2017 – 3109 / 001 – 001)

Početna evaluacija bola može započeti sa PQIRST karakteristikama:

P (*Palliative factors* = Palijativni faktori): Šta utiče na smanjenje bola?

Q (*Quality* = Kvalitet): Opišite kakav je bol.

R (*Radiation* = Radijacija): Da li se širi?

S (*Severity* = Jačina): Koliko je jak bol?

T (*Temporal* = Vremenski factor): Da li je stalno prisutan ili se povremeno javlja?

Dve najvažnije stvari koje dobijamo iz razgovora sa bolesnikom su opis bola i jačina bola.

Project number: 585927-EPP-1-2017-1-RS-EPPKA2-CBHE-JP (2017 – 3109 / 001 – 001)
